

# Hospital Management System

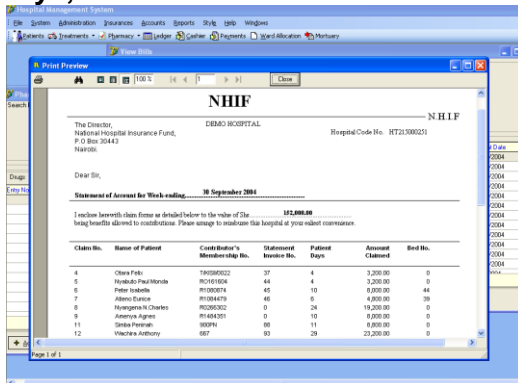

## Introduction

Hospital Management System offers functionalities that covers the entire range of hospital activities. We believe that each hospital is unique in its requirements and priorities. Hence our offering provides flexibility to the hospitals, whether large or medium sized, to choose from various modules to match their specific needs.

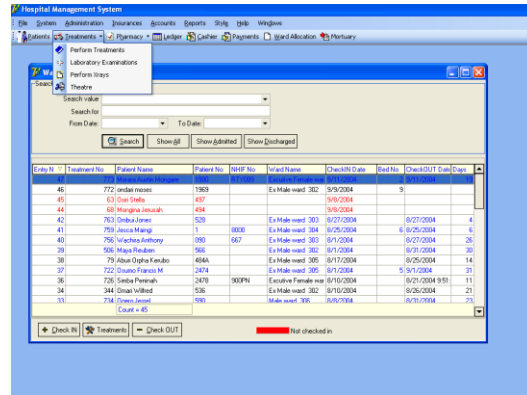

## Modularity

Hospital management system is a comprehensive package that includes various modules which cater to different functional areas of healthcare institutions. The Hospital Management System offers you the flexibility to choose and implement only those modules which are required for your institution. **Available modules include: Patient registration, Inpatient & Outpatient, Laboratory, Pharmacy, X-rays, Theatre etc**

## User Friendliness

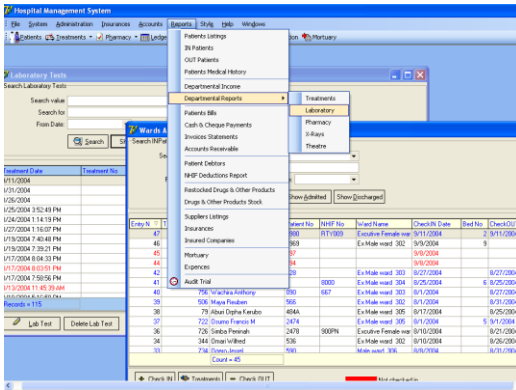

The Hospital Management System is extremely easy to use because of the extensive assistance provided during any data entry operations. The package is menu-driven and help is provided for screens. A comprehensive user's manual, detailing different procedures for various tasks, is also provided.

## Graphical User Interface

A good GUI always sets one off on the right track, helping users navigate without a hitch. The easier it is to understand the greater is the chance that more people will feel comfortable with it.

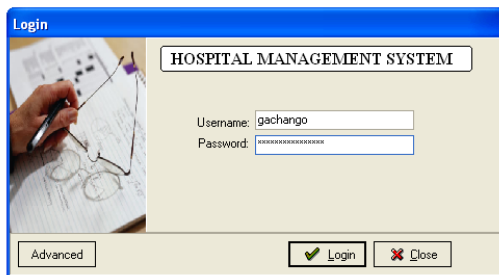

Hospital Management System graphical user interface enhances all the user friendly features of the system. The point and click features of the mouse reduces excessive usage of the keyboard, thus making most tasks easy-to-do and hassle free. This saves time and makes information easy to store and easy to access when required.

## Security

One of the major concerns of most hospital is confidentiality of reports and records. Because of the sheer size and magnitude of patient's data, this is anything but an easy task. Hospital Management, provides multiple levels of security in the software, so that data pertaining to various functions of the hospital remains confidential.

Records and information are protected against loss, destruction, tempering and unauthorized access or use. Confidentiality, security and integrity of data and information is maintained. Transmission of data and information is timely and accurate.

## Benefits of Hospital Management System

1. Streamlined operations.

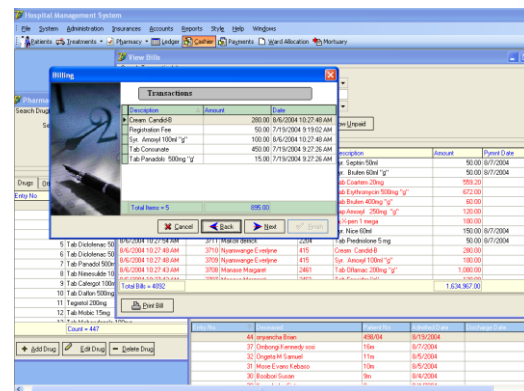

The Hospital Management system provides manifold benefits to hospitals everywhere, whether large or medium sized, maximized documentations and no duplications of records in different departments. Reduces paperwork.

2. Better administration control

Availability of timely and accurate information, access to updated management information.

3. Smart Revenue Management

Optimized bed occupancy checks, effective billing of various services, and exact stock information of drugs on shelf (including their expiry dates).

## Pricing

Pricing is based on the number of modules to be installed and the number of terminals that will be connected.
